Krishna Deep Yerramallu

+1 (201) 630-1679 | kyerrama@stevens.edu | LinkedIn | Portfolio Website

Education

Stevens Institute Of Technology **Hoboken, New Jersey**
Masters of Science in Computer Science *Expected Graduation: December 2025*

Experience

Data Engineer / Business Analyst **August 2022 – August 2024**
Silicon Labs *Hyderabad, Telangana*

- Developed a diverse set of Python and Go scripts to facilitate data collection through Robotic Process Automation (RPA) and streamline data orchestration processes reducing human intervention by more than 75%.
- Created SQL scripts and applied advanced design patterns to enhance data processing, movement, and retrieval, achieving a 39% reduction in Azure egress costs from 2023 to 2024 as part of data warehousing initiatives.
- Migrated legacy applications, data sources, and reports from on-premises environments to the cloud as part of a comprehensive cloud migration project.
- Collaborated closely with multiple departments to pinpoint essential key performance indicators (KPIs) and craft visualization dashboards, empowering teams to efficiently track and manage their performance.

Research Assistant - Deep Learning and Machine Learning **January 2020 - January 2022**
Keshav Memorial Institute Of Technology *Hyderabad, Telangana*

- Contributed to early-stage Breast Cancer Detection by developing Machine Learning and Deep Learning solutions for Estrogen - Progesterone Receptor Detection and Deep Learning Models for Tubule Segmentation in whole-slide images, aiding the Allred Scoring system.
- Developed APIs that are now actively used by diagnostic centers, assisting pathologists in tissue annotation and grading, improving workflow efficiency by over 80%.

Publications

- Deep Learning Model for Enhanced Nottingham Grading of Breast Cancer on Whole Slide Images (WSI) to Achieve Superior Diagnostic Precision and Efficiency. (Primary Focus: Tubule Segmentation) (Scopus, Under Review).

Technical Skills

Languages: Java, Python, C/C++, Go, Scala, SQL **Cloud Technologies:** Azure, Azure Data Factory, AWS
Visualizations Technologies: Tableau, Power BI **Operating Systems:** Linux, Mac OS, Windows
Other Technologies: Docker, Kubernetes, Kafka, Spark, Git, GraphQL, Jenkins, Snowflake
Relevant Coursework: Advanced Database Management, Advanced Data Structures and Algorithms, Machine Learning, Concurrent programming, Enterprise Software Architecture and Design.

Projects

Database Synchronization | *Python, Go, SQL, Azure, AWS, Cron, Apache Airflow* **August 2024 - Present**

- Implemented a data synchronization and replication solution using Change Data Capture (CDC) to replicate cloud-hosted SQL tables (extendable to on-premise) to an on-premise SQL Server, reducing egress costs by 40% while maintaining data consistency.
- Leveraged SQL Server Agent Jobs, SQL Triggers, Cron Jobs for automated scheduling, Python / Go for manipulation and extraction, and optimized transfer by capturing only modified rows, resulting in a 25% reduction in data transfer volume.

Data Warehousing 4.0 | *Azure, PowerShell, Python, Tableau, Power BI* **August 2022 - July 2024**

- Led the design, implementation, and management of a data warehousing solution using Azure SQL Database to store and analyze organizational data, while overseeing the migration of existing data from on-premises and other cloud platforms to Azure SQL Data Warehouse for optimized performance and scalability.
- Designed and implemented the database architecture and advanced SQL design patterns for Azure Data Warehouse, optimizing data manipulation, storage, and query performance through tables, views, indexes, and stored procedures.
- Automated data pipelines and integrated analytics orchestration using JAMS Scheduler, Python and multithreading techniques, ensuring scalability, data integrity, and high availability for large-scale data processing.

Leadership / Extracurricular

Recurse - The Technical Club **September 2020 – August 2024**
Head of the Club, Peer Mentor *Keshav Memorial Institute Of Technology*

- Conducted a wide range of events, including workshops, hackathons, alumni lectures, and national-level coding competitions, to provide participants with a holistic exposure to the corporate world.
- Worked on Kinect360, DJI Drone, Ardupilot Drone, Raspberry Pi, Arduino, Humanoid Robot as a club.
